

SWITCHABLE TORQUE & CADENCE SENSOR MODES

- Most 2024 Troxus models are equipped with components that allow for switching between Torque & Cadence modes.
- Easily switch between modes with a press of a button.
- Torque mode allows for a smoother, more natural riding feel and lengthens battery charge while on pedaling mode.
- Designed to fully use the rider's power output.
- Cadence mode allows for riding with less pedaling effort / Detects small crankarm rotations (1/4 to 1/2 of a turn).
- Maintain a constant speed with very little pedaling (ghost pedaling).
- Cadence mode also functions well under normal active pedaling.
- Performance close to a Torque sensor mode.
- Throttle assist works in both Torque & Cadence modes.
- With display on basic interface, press "+" for a few seconds to switch between Torque and Cadence modes.
- Switching to Cadence sensor mode will display the Cadence mode icon.
- No "Cyclist" icon means that the Torque sensor mode has been selected.

TORQUE SENSOR MODE
Torque mode will not display this icon

CADENCE SENSOR MODE
Cadence mode will display this icon

LYNX FOLDING

CLASS 2 / 20MPH
